WEEK 1 PROJECT

Holidays Property Management APP

By Sara Castellino

A holidays property manager (co-host) has approached you to build a web application to help them manage their bookings, guests and properties on a digital agenda.

A property may be rented to many guests at a time. A guest is registered with only one holiday property.

MVP

- The co-host wants to be able to register / track guests
- Be able to assign guests to holiday properties, be able to create bookings
- CRUD actions for holiday properties / guests / bookings
- The views should allow the co-host to see bookings sorted by booking platform, guests by name, properties by place.

The Brief

POSSIBLE EXTENSIONS

- There should be a search tab with autocomplete enabling the property manager to search for guests and properties from the website header
- The views should allow the co-host to see bookings, guests and properties sorted by all parameters
- If a property has multiple guests we don't want to keep updating contact details separately for each guest. Extend your application to reflect that a property can have many guests and to more sensibly keep track of guests' details (avoiding repetition / inconsistencies)
- Guests who are not over 21 or have no documents should not be able to book
- Groups bigger than the property sleeps number should not be able to book

POSSIBLE EXTENSIONS

- The guest could have a budget and properties a daily fee: if guests don't reach the total fee they should not be able to book
- Handle check-in / check-out dates
- Let the co-host see all guests currently in the property (today's date is between the check-in and check-out?)
- Co-hosts usually want to retain the good clientele and a powerful retention tool is discounts: build an extension to offer a 20% off the next booking
- Add extra functionality of your choosing
 - calculating the earning per booking after commissions, providing services (late check-in, bike rentals etc).

The Protopersona

NAME

Carla Cabras

DEMOGRAPHICS

- age 30/40
- lives in a touristic place
- high-school/degree
- co-host in holiday properties
- pub owner
- colourblind (protanopia)

Essential Aspects

BEHAVIOURS

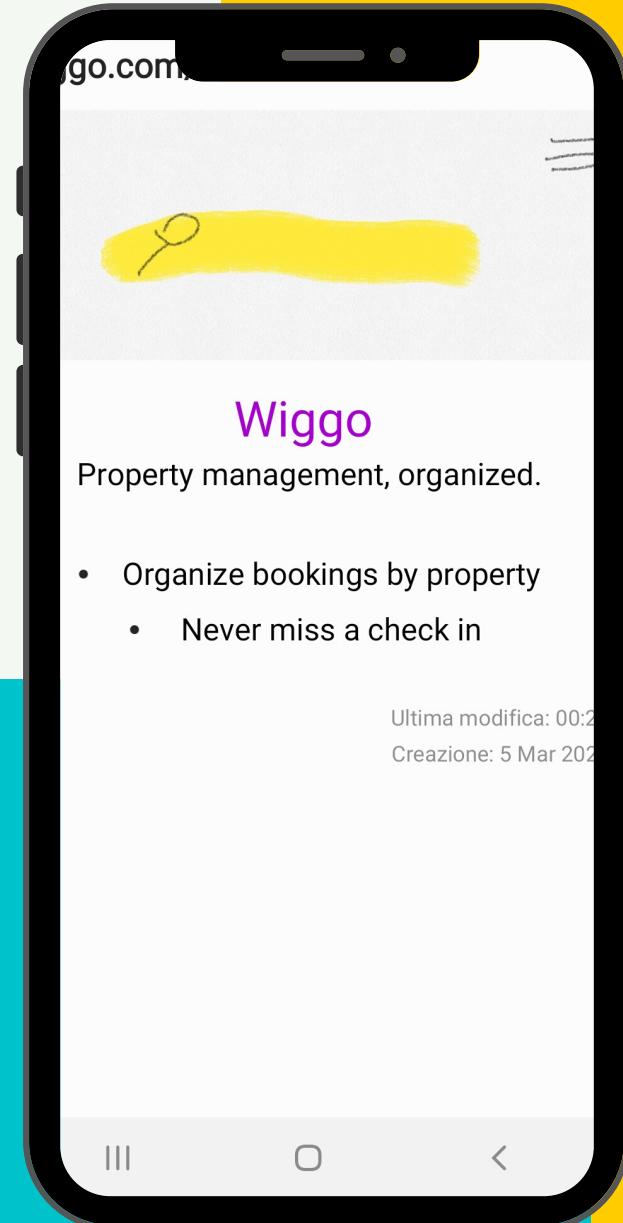

- loves reading, swimming and surfing
- owns a pub which she runs mainly in winter
- manages 10 holiday properties mainly from April to October
- works in close contact with customers (clients at the pub and guests during summer holidays)
- is used to work in Italian, English, French and Spanish
- is used to manage pub/properties bookings online and to edit her pub's website through website building platforms

NEEDS AND GOALS

- needs to manage the bookings easily and in real time
- needs to manage all the bookings cross-platform
- needs a simple design and easily readable web pages
- needs more free time
- wants to expand her houses portfolio

How important is good design?
